

We value *uncertain assets* for a living.

Ambrosia runs a proprietary intelligence platform that prices biopharma deals: contracts whose worth depends on performance, health and time. It reads primary filings every day, verifies every figure, and returns a **risk-adjusted value range** in under 30 seconds. A front office faces the same problem each time it signs, trades or extends a player.

1,400+	24
source-verified licensing and M&A transactions, 2017 to today	valuation and decision engines, each linked to cited data
10,000	83
correlated Monte Carlo paths behind every valuation	counterparty profiles that model each buyer's willingness to pay
<30 _s	
from question to a sourced, board-ready memo	

How the platform thinks

- 1
- Ingest · daily
SEC EDGAR full text since 2017, Hong Kong exchange filings, press wires, FDA and ClinicalTrials.gov.
- 2
- Verify · cite or exclude
Every term is scored and linked to its filing. Anything below 75/100 confidence stays out of the models.
- 3
- Model · 24 engines
Risk-adjusted NPV, comparable scoring, buyer premiums and live macro rates, run under correlated uncertainty.
- 4
- Decide · ranges, not points
A memo with a value band, its comparables and the assumptions that move it most.
- 5
- Learn · weekly backtest
Estimates are scored against real outcomes, including 164 approved-drug trajectories, then recalibrated.

Same problem, different roster

WHAT WE PRICE TODAY	WHAT IT MAPS TO AT MSG
Licensing terms: upfront, milestones, royalty tiers	→ Guaranteed money, incentives, player and team options
Probability of success by phase, PoS	→ Availability and aging curves by position and role
Risk-adjusted asset value, rNPV	→ Risk-adjusted contract value across every season of the deal
Buyer-specific premiums across 83 pharma profiles	→ Each rival team's cap room, needs and bidding behavior
Scored comparable transactions	→ Scored comparable contracts and trades
Clinical pipeline and FDA surveillance	→ Sports-medicine and recovery science radar

Where we would start

THREE PARTNERSHIP TRACKS

FRONT OFFICE
Contract and trade valuation Point our valuation engine at player contracts: a value range, the comparables behind it, and how rival teams are likely to bid. Output: a pre-negotiation memo for every major contract decision.
MEDICAL & PERFORMANCE
Athlete health intelligence Our home domain. We track trials, FDA clearances and new therapies in orthopedics, concussion and recovery, and flag what reaches the clinic next.
